

The scatter plot displays the relationship between Weight (kg) and an unlabeled variable. The x-axis ranges from 0 to 160 kg, and the y-axis ranges from 0 to 10. The data points are colored by a gradient from yellow to purple, corresponding to the 'color' variable in the dataset. The plot shows a positive correlation between weight and the unlabeled variable, with a dense cluster of points between 60 and 100 kg.
